FACIAL RECOGNITION

This is a test to see how well you can remember faces and when. There are two parts A and B, and each part will have 12 photos of faces. You only have a short time, 4 seconds, to see each face before the program moves to the next face. Part A will begin and when that is finished you can start Part B.

When Part B is finished, the test will begin. The test will consist of showing 48 faces and below each face you will have a choice of choosing whether you have seen the face, either in Part A or in Part B, or whether or not you have seen the face at all. After you have made your selection for face number 48 your score will appear and you will be able to see how you scored.

Good luck!
